OIL PUMP KIT

2901110800

This kit is part of a preventive maintenance. The oil isn't just a lubricant; it absorbs heat generated during compression and transfers it out (via the cooler) to prevent internal overheating.

A failed or poorly performing pump can compromise this cooling function, leading to higher internal temperatures.

Function of the 2901110800 Kit

By ensuring stable oil circulation, the kit protects against scenarios like low oil pressure which can lead to damage. Regular maintenance of the pump (using this kit) helps avoid such failures.

The oil pump kit is therefore not just a "nice-to-have" spare part; it's central to the lubrication loop, which directly affects how smoothly and efficiently the compressor runs.

TECHNICAL SPECIFICATION

Parameter	Typical Value / Range
Component Type:	Oil Pump Kit (2901110800)
Components in the kit:	Eccentric Ring, Oil pump, Parallel ket, Piston, Spring, Plug, O-Rings (various sizes), Cover plate, Bolt, Washer, Pin.
Primary function:	It is a service / maintenance kit for the oil pump in screw compressors..
Function:	Maintain Oil Pressure, Lubrication, Sealing, Cooling, System reliability,
Scheduled Maintenance:	Using the correct service kit helps ensure that all critical sealing points are addressed in one maintenance action, rather than piecemeal sealing replacements.
Prevention:	Prevent Any Damage in the system.

Technical support 24/7

We offer 24/7 technical support to ensure quick assistance whenever needed. Our team is always ready to help with product setup, troubleshooting, and urgent service requests.

Consultation

Need help choosing the right product? We provide expert consultations to guide you through selection, technical compatibility, and project-specific requirements.
Warranty

Product Warranty

All parts come with a minimum warranty against all manufacturing defect. We guarantee the quality and reliability of every product supplied.
