AIR COMPRESSOR REPAIR KIT

2906039400

This kit is part of a preventive maintenance regime for compressors, aligning with recommended service intervals. Using the correct service kit helps ensure that all critical sealing points are addressed in one maintenance action, rather than piecemeal sealing replacements.

Function of the 2906039400 Kit

The 2906039400 kit's primary function is to replace seals (O-rings, washers)

This is critical for preventing leaks, maintaining cooling performance, avoiding pressure loss, and keeping the compressor reliable. It's a preventive maintenance kit — not a major mechanical overhaul but very important for long-term operational stability.

TECHNICAL SPECIFICATION

Parameter	Typical Value / Range
Component Type:	Air compressor repair kit (2906039400)
Components in the kit:	Multiple O-rings / seal rings, of different sizes. Seal washers (Dowty) for sealing the interface. Plug according to kit list.
Primary function:	Primary function is to replace seals (O-rings, washers).
Function:	This kit is an Intercooler Service Kit for certain compressors Its main job is to replace O-rings and seals .
Scheduled Maintenance:	Using the correct service kit helps ensure that all critical sealing points are addressed in one maintenance action, rather than piecemeal sealing replacements.
